

Raptor® Emergency Management Parent-Student Reunification Module

Reunite students with approved guardians in accordance with the best practices and protocols . . . *faster.*

ENSURE RAPID & ACCURATE REUNIFICATION

Coordinating student status, location, and reunification with authorized guardians offsite can be complicated and time consuming. The Raptor Emergency Management Parent-Student Reunification module increases your speed, accuracy, and efficiency. In timed comparison trials, the Raptor Parent-Student Reunification module proved **4 TIMES FASTER** than paper-and-pencil based methods. And time matters. Research shows that the sooner students are reunited with caregivers, the less likely they are to display symptoms of traumatic stress.

SPEED

Streamline and expedite the reunification process using proven protocols combined with the latest in mobile technology.

ACCURACY

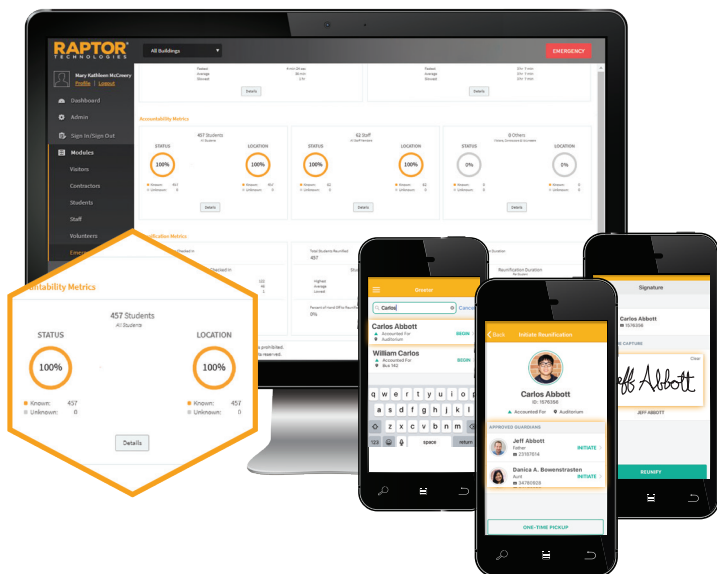

Ensure anyone picking up a student is an authorized guardian by using mobile devices to verify guardian identity, record each guardian signature, and time-stamp data for each reunification.

DOCUMENTATION

Track every individual's status changes in real time, and generate a detailed history of events for each student and staff member for post-incident reporting and debriefing.

FULL ALIGNMENT WITH SRM

The module aligns directly with The "I Love U Guys" Foundation® Standard Reunification Method™ (SRM). The module dramatically cuts reunification time by replacing handwritten processes with instant mobile communications and automated record-keeping.

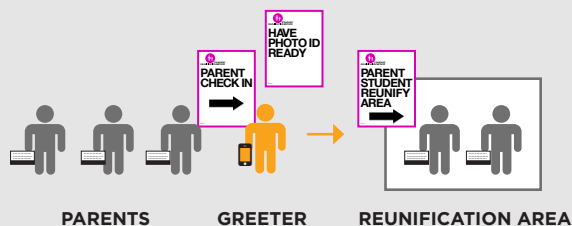

“

[T]he pay-off was when we had this real emergency. [Everyone] saw firsthand just how fantastically [Raptor] works and how fast and accurately reunification went . . .

— Weatherford (TX) ISD

”

The Parent-Student Reunification module aligns directly with the **Standard Reunification Method™ (SRM)**.

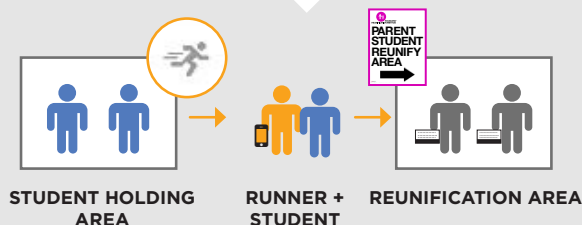

Step 1: Greeting, check-in, and ID verification

As parents arrive at the reunification site, greeters hand over a **process explanation card**, receive information from the parent on which student(s) he/she is picking up, and verify the parent's ID (the SRM information card completion is unnecessary, because the pertinent info is contained in the Raptor system). Greeters instruct parents to move to the reunification area following check-in.

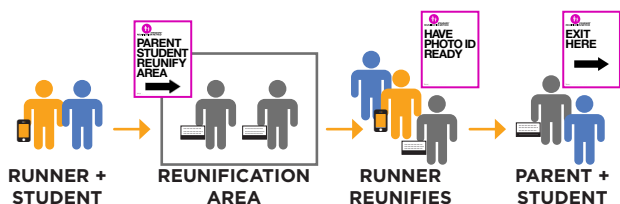

Step 2: Reunification communication

After the parent checks in with the greeter and moves to the reunification area, a runner is notified **via the Raptor mobile app** that the student's parent has arrived and that the student is ready to be reunified.

Step 3: Student retrieval

The runner retrieves the student from the student holding area and then escorts the student to the reunification area.

Step 4: Parent-student reunification

The runner arrives at the reunification area with the student, asking the student whether he/she is comfortable leaving with the parent. Upon identification confirmation, **the parent signs electronically in the app**, and the parent and student are then free to leave. An electronic log of the entire reunification process is captured in the system and is available to download for reporting and accountability.
