

# Raptor® Emergency Management Drill Management Module

Schedule, conduct, and manage drills, record results, and track compliance at the school or district level from a user-friendly dashboard.

## SIMPLIFY DISTRICT-WIDE DRILL MANAGEMENT

Scheduling, conducting, and reporting on drill status during a busy school year—especially across an entire district—can be a big logistical challenge. The Raptor Drill Management module makes it easy.

## CREATE AND SCHEDULE

The Drill Management module allows you to create customized drill requirements and schedule them for the entire district in minutes. Automated notifications will remind each school of upcoming scheduled drills, and alerts to district administrators will let them know of any schools that are out of compliance.

## CONDUCT AND MANAGE

School officials can initiate drills directly from a smart phone or tablet, and a record of the drill being completed will be automatically populated in real time within the software, so no extra time needs to be spent recording drill details or completion. Any additional required documentation can be uploaded into the software for complete record keeping.

## TRACK AND REPORT

Highly visual tracking dashboards allow district administrators to scan drill compliance status quickly for every building, drill type, and compliance status. The reporting tab enables administrators to produce complete and accurate status reports for individual schools or the entire district with the click of a mouse.
