

RaptorLink Implementation Overview

RaptorLink is an automated way to sync data from a district's Student Information System (SIS) into Raptor. Raptor partners with Clever to facilitate the transfer of student, staff, roster, and guardian data in near real time to the Raptor system.

Step 1: District Designates Student Information System Contact

- The dedicated Raptor Project Manager will discuss what RaptorLink does and overview the implementation process.
- District will designate a point of contact to manage the RaptorLink implementation. This is normally a SIS Admin or someone who manages the system closely.

Step 2: RaptorLink Implementation Kickoff Call with Raptor Professional Services Engineer

- The dedicated Professional Services Engineer will work with the district to discuss why RaptorLink was purchased, establish implementation timeline and expectations, and answer any outstanding questions.
- Raptor will explain how to get the district connected with Clever.
- Depending on which Student Information System the district uses, Raptor will recommend syncing methodology.

Step 3: District Connects with Raptor via Clever

Step 4: District Shares Data with Clever

Step 5: Professional Services Engineer Activates RaptorLink

Step 6: Data Validation/Wrap-Up Call

- This call focuses on reviewing the implementation, expectations, the state of the data, and intended use.
- To complete the RaptorLink implementation, the Professional Services Engineer will work through a checklist of data validation items with the district contact. After review and approval, the completed data validation checklist will be returned to the district and the implementation will be considered complete.
